**Subscription Information.** Discrete Mathematics (ISSN 0012-365X) is published in 10 volumes (30 issues) a year. The subscription price for 1991 (Vols. 87-96) is Dfl. 2500.00 + Dfl. 300.00 p.p.h. = Dfl. 2800.00 (US\$ 166.50). (Combined subscription: Discrete Mathematics + Discrete Applied Mathematics (Vols. 30-34) = Dfl. 3180.00 + Dfl. 450.00 p.p.h. = Dfl. 3630.00.) The Dutch guilders price is definitive. The US dollar price is subject to exchange-rate fluctuations and is given only as a guide. Subscriptions are accepted on a prepaid basis only, unless different terms have been previously agreed upon. Personal subscription rates and conditions, if applicable, are available upon request from the Publisher. Subscription orders can be entered only by calendar year (Jan.-Dec.) and should be sent to Elsevier Science Publishers, Journal Department, P.O. Box 211, 1000 AE Amsterdam, Netherlands, telephone 31.20.5803642, fax 31.20.5803598, or to your usual subscription agent. Postage and handling charges include surface delivery except to the following countries where air delivery via SAL (Surface Air Lift) mail is ensured: Argentina, Australia, Brazil, Canada, China, Hong Kong, India, Israel, Malaysia, Mexico, New Zealand, Pakistan, Singapore, South Africa, South Korea, Taiwan, Thailand, USA. For Japan air delivery (SAL) requires 50% additional charge of the normal postage and handling charge. For all other countries airmail rates are available upon request. Claims for missing issues must be made within three months of our publication (mailing) date, otherwise such claims cannot be honoured free of charge.

**Special regulations for authors**—Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Submission of a paper to this journal entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

**Special regulations for readers in the USA**—This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US\$ 2.25, also payable through the Center. This consent does not extend to other kinds of copying such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein. Although all advertising material is expected to conform to ethical standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

This journal is printed on acid-free paper.

## List of referees: volumes 81-90

DISCRETE MATHEMATICS has continuously benefitted from the kind assistance of a great number of referees. We hereby express our gratitude for their sustained efforts, without which our activity could not have been carried out.

# Topics on Domination

by S.T. Hedetniemi and R.C. Laskar

Reprinted from the journal *Discrete Mathematics*, Vol. 86, no. 1/3

Annals of Discrete Mathematics Volume 48

1991 vi + 280 pages

Price: US \$ 143.00 / Dfl. 250.00

ISBN 0-444-89006-8

The contributions in this volume are divided into three sections: theoretical, new models and algorithmic. The first section focuses on properties of the standard domination number  $\chi(G)$ , the second section is concerned with new variations on the domination theme, and the third is primarily concerned with finding classes of graphs for which the domination number (and several other domination-related parameters) can be computed in polynomial time.

*Contents:* Part I: Introduction (S.T. Hedetniemi, R.C. Laskar).

Part II: **Theoretical.** Chessboard Domination Problems (E.J. Cockayne). On the Queen Domination Problem (C.M. Grinstead, B. Hahne, D. Van Stone). Recent Problems and Results About Kernels in Directed Graphs (C. Berge, P. Duchet). Critical Concepts in Domination (D.P. Summer). The Bondage Number of a Graph (J.F. Fink et al.). Chordal Graphs and Upper Irredundance, Upper Domination and Independence (M.S. Jacobson and K. Peters). Regular Totally Domatically Full Graphs (B. Zelinka). Domatically Critical and Domatically Full Graphs (D. Rall). On Generalised Minimal Domination Parameters for Paths (B. Bollobás, E.J. Cockayne, C.M. Mynhardt). Part III: **New Models.** Dominating Cliques in Graphs (M.B. Cozzens, L.L. Kelleher). Covering all Cliques of Graph (Z. Tuza). Factor Domination in Graphs (R.C. Brigham, R. Dutton). The Least Point Covering and Domination Numbers of a Graph (E. Sampathkumar). Part IV: **Algorithmic.** Dominating Sets in Perfect Graphs (D.G. Corneil, L.K. Stewart). Unit Disk Graphs (B.N. Clark, C.J. Colbourn, D.S. Johnson). Permutation Graphs: Connected Domination and Steiner Trees (C.J. Colbourn, L.K. Stewart). The Discipline Number of a Graph (V. Chvátal, W.J. Cook). Best Location of Service Centers in a Tree-Like Network under Budget Constraints (J. McHugh, Y. Perl). Dominating Cycles in Halin Graphs (M. Skowronska, M.M. Syslo). Finding Dominating Cliques Efficiently, in Strongly Chordal Graphs and Undirected Path Graphs (D. Kratsch). On Minimum Dominating Sets with Minimum Intersection (D.L. Grinstead, P.J. Slater). Part V: **Bibliography.** Bibliography on Domination in Graphs and Some Basic Definitions of Domination Parameters (S.T. Hedetniemi, R.C. Laskar).

# Latin Squares

## New Developments in the Theory and Applications

by J. Dénes and A.D. Keedwell

Annals of Discrete Mathematics Volume 46

1991 xiv + 454 pages

Price: US \$ 128.50 / Dfl. 225.00

ISBN 0-444-88899-3

In 1974 the editors of the present volume published a well-received book entitled "Latin Squares and their Applications". It included a list of 73 unsolved problems of which about 20 have been completely solved in the intervening period and about 10 more have been partially solved. The present work comprises six contributed chapters and also six further chapters written by the editors themselves. As well as discussing the advances which have been made in the subject matter of most of the chapters of the earlier book, this new book contains one chapter which deals with a subject ( $r$ -orthogonal latin squares) which did not exist when the earlier book was written. The success of the former book is shown by the two or three hundred published papers which deal with questions raised by it.

*Contents:* Introduction (J. Dénes, A.D. Keedwell). Transversals and Complete Mappings (J. Dénes, A.D. Keedwell). Sequenceable and R-Sequenceable Groups: Row Complete Latin Squares (J. Dénes, A.D. Keedwell). Latin Squares With and Without Subsquares of Prescribed Type (K. Heinrich). Recursive Constructions of Mutually Orthogonal Latin Squares (A.E. Brouwer).  $r$ -Orthogonal Latin Squares (G.B. Belyavskaya). Latin Squares and Universal Algebra (T. Evans). Embedding Theorems for Partial Latin Squares (C.C. Lindner). Latin Squares and Codes (J. Dénes, A.D. Keedwell). Latin Squares as Experimental Designs (D.A. Preece). Latin Squares and Geometry (J. Dénes, A.D. Keedwell). Frequency Squares (J. Dénes, A.D. Keedwell). Bibliography. Subject Index.

## Scope of the Journal

The aim of this journal is to bring together research papers in different areas of discrete mathematics. Contributions presented to the journal can be research papers, short notes, surveys, and possibly research problems. The 'Communications' section will be devoted to the fastest possible publication of the brief outlines of recent research results, the detailed presentation of which might be submitted for possible publication in DISC or elsewhere. The journal will also publish a limited number of book announcements, as well as proceedings of conferences. The journal will publish papers in combinatorial mathematics and related areas. In particular, graph and hypergraph theory, network theory, coding theory, block designs, lattice theory, the theory of partially ordered sets, combinatorial geometries, matroid theory, extremal set theory, logic and automata, matrices, polyhedra, discrete probability theory, etc. shall be among the fields covered by the journal.

## Instructions to contributors

All contributions should be written in English or French, should have an abstract in English (as well as one in French if the paper is written in French), and—with the exception of Communications—should be sent in triplicate to Nelly Segal, Publications Assistant, RUTCOR—Rutgers Center for Operations Research, Hill Center for the Mathematical Sciences, Rutgers University, New Brunswick, NJ 08903, USA. The authors are requested to put their mailing address on the manuscript. Upon acceptance of an article, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Manuscripts submitted for the Communications section, having at most 5 typewritten pages, should be sent to a member of the editorial board in triplicate. Detailed proofs do not have to be included, but results must be accompanied at least by rough outlines of their proofs. Subsequent publication in this journal or elsewhere of the full text of a research report, the outline of which has been published in the Communications section of our journal, is not excluded. Every effort shall be made for the fastest possible publication of Communications. Therefore all proofreading will be done by the Publisher's staff and no proofs will be sent to authors. Consequently the presentation of these manuscripts should be very clear. No page charge is made.

Please make sure that the paper is submitted in its final form. Corrections in the proofstage, other than of printer's errors, should be avoided; costs arising from such extra corrections will be charged to the authors.

The manuscript should be prepared for publication in accordance with instructions given in the 'Instructions to Authors' (available from the Publisher) details of which are condensed below:

1. The manuscript must be typed on one side of the paper in double spacing with wide margins. A duplicate copy should be retained by the author.
2. All mathematical symbols which are not typewritten should be listed separately.
3. Footnotes, which should be kept to a minimum and should be brief, must be numbered consecutively and typed on a separate sheet in the same format as the main text.
4. Special care should be given to the preparation of the drawings for figures and diagrams. Except for a reduction in size, they will appear in the final printing in exactly the same form as they were submitted by the author; normally they will not be redrawn by the printer. In order to make a photographic reproduction possible, all drawings should be on separate sheets, with wide margins, drawn large size, in Indian ink, and carefully lettered. Exceptions are diagrams only containing formulae and a small number of single straight lines (or arrows); these can be typeset by the printer.
5. References should be listed alphabetically, in the same way as the following examples:  
*For a book:* W.K. Chen, *Applied Graph Theory* (North-Holland, Amsterdam, 1971).  
*For a paper in a journal:* J. Rhodes and B.R. Tilson, Lower bounds for complexity of finite semigroups, *J. Pure Appl. Algebra* 1 (1971) 79–95.  
*For a paper in a contributed volume:* M.O. Rabin, Weakly definable relations and special automata, in: Y. Bar-Hillel, ed., *Mathematical Logic and Foundations of Set Theory* (North-Holland, Amsterdam, 1970) 1–23.  
*For an unpublished paper:* D. Allen, Relations between the local and global structure of finite semigroups, Ph.D. Thesis, University of California, Berkeley, CA, 1968.

## Author's benefits

1. 30% discount on all book publications of North-Holland.
2. 50 reprints are provided free of charge to the principal author of each paper published.

### AIMS AND SCOPE

**Computational  
Geometry** is a forum for  
research in theoretical and  
applied aspects of  
computational geometry.

The journal publishes  
fundamental research in all  
areas of the subject, as well as  
disseminating information on  
the applications, techniques,  
and use of computational  
geometry.

**Computational Geometry**  
publishes articles on:

1. Design and analysis of  
geometric algorithms.
2. All aspects of  
computational geometry  
including:
  - numerical
  - graph theoretical
  - combinatorial.
3. Computational geometry  
solutions to fundamental  
problems arising in
  - computer graphics
  - pattern recognition
  - robotics
  - image processing
  - CAD-CAM, VLSI design
  - geographical information  
systems.

**Computational Geometry**  
also contains a special section  
containing open problems  
and concise reports on  
implementations of  
computational geometry  
tools.
